

Release 09 Oct 2021

Dear VigiFlow user,

VigiFlow is updated with a new feature which is described below.

Restore previous report version

It is now possible to restore a previous version of a report from the audit trail in the report list. Expand the audit trail for the report you would like to restore to a previous version. Each previous revision can be viewed in pdf format by clicking on the report row in the audit trail.

Click the restore icon on the version of the report you would like to restore to. After confirming the restore, the report is restored back to the selected version.

If you have any questions or comments, please contact vigibase@who-umc.org
