

VigiFlow release 22 November 2022

What's new?

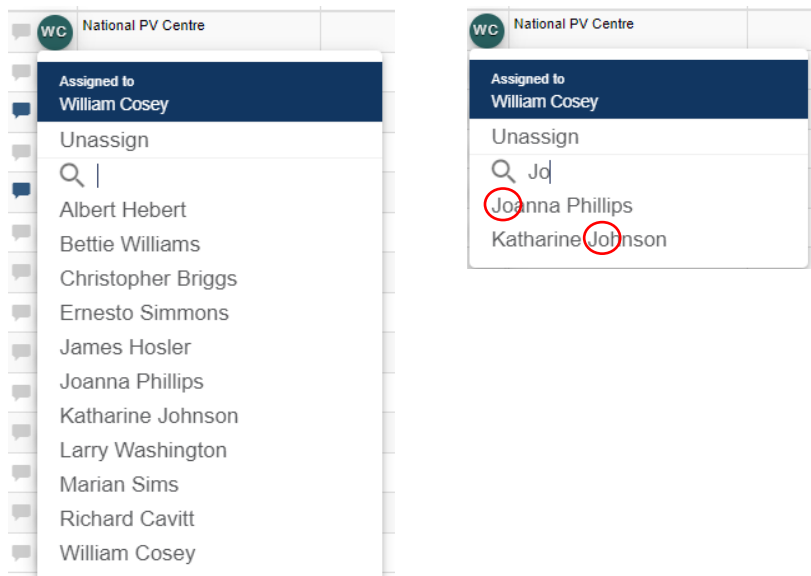

This release is mainly a maintenance release, with only a few changes affecting the VigiFlow users.

Renamed header in AEFI excel

From this release, the header of the AEFI excel column named "Health facility city" has changed to "Health facility locality" to harmonize with the naming in the AEFI data entry form. In languages other than English, the name of the column in the AEFI excel has changed to align with the name of the corresponding field in the AEFI data entry form.

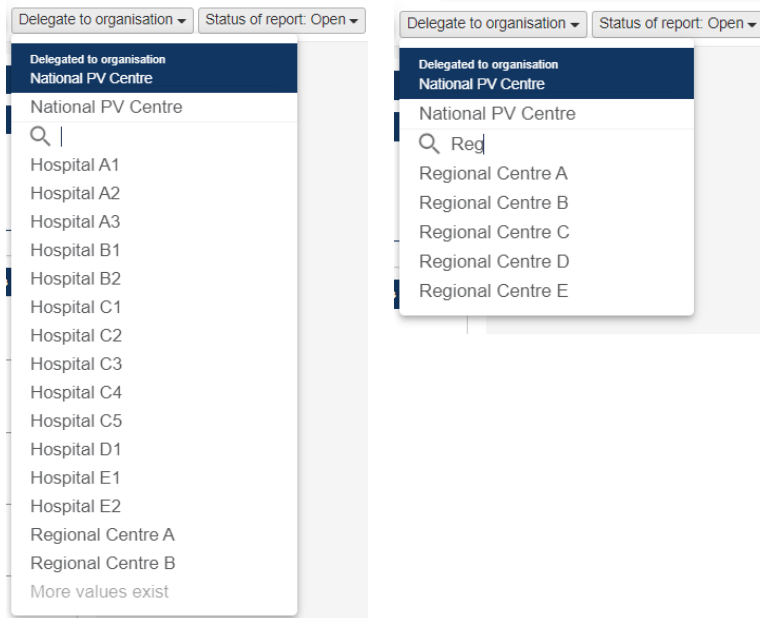

Possibility to search for user when assigning a report

It is now possible to search for a user in the list when assigning a report. The list of search results includes all items containing the entered letters.

Possibility to search for organisation when delegating reports

It is now possible to search for an organisation in the list of organisations, when delegating reports. The list of search results includes all items containing the entered letters.

The image shows two side-by-side screenshots of a web interface. Each screenshot has a header with two dropdown menus: 'Delegate to organisation' and 'Status of report: Open'. Below the header is a search bar with a magnifying glass icon and a text input field. The first screenshot shows the search bar with 'National PV Centre' selected. The second screenshot shows the search bar with 'Reg' entered. Both screenshots show a list of search results below the search bar.
