WHODrug Global March 2022 version now available

The March 2022 version of WHODrug Global is now available. It can be downloaded from the WHODrug website (www.whodrug.com) or accessed via the WHODrug web application. This version includes a new feature in the learning model, which is described further in the learning model section below.

Reminder: Changes to the WHODrug product files and modified packaging

As previously announced, in the March 2022 release of WHODrug Global, several modifications to the WHODrug global files have been made to reflect new regulations and technical developments. More about the modifications below or on the WHODrug website:

- The substance name field has been extended to 250 characters in both the IUPAC and CAS formats, to accommodate a more granular naming of substances.
- The coding of drug names in the IUPAC format has been updated to standardize the appearance of drug names being used.
- The country sales and country names have been updated for a few countries, to harmonize with the IUPAC standards.
- The capability of the WHODrug Koda software to create a faster and smaller download has been improved.

Did you know that WHODrug Koda is offered free of charge to our members within our WHODrug Tender Programme? If you would like to access WHODrug Koda within your drug coding tool, please refer your vendor to the WHODrug Tender Programme for more information on how to get access.
