

Release 07/08 Dec 2021

Dear VigiFlow user,

VigiFlow is updated with some new features which we hope you will find useful. A summary of the changes is provided below.

Safety profile statistics excel additions

New tabs with aggregated data for the following topics have been added.

- **Adverse Event (PT) per Dose**, the table presents the coded WHODrug records, the number of MedDRA-coded reports on PT level and information about after which dose the adverse event occurred. The full description is available in the safety profile statistics excel.
- **Serious per Product**, the table presents the coded WHODrug records, and the number of reports associated with them with distinction whether the event was serious or not. The full description is available in the safety profile statistics excel.
- **Seriousness per Product**, the table presents the coded WHODrug records, and the number of reports associated with them with distinction of seriousness criteria. The full description is available in the safety profile statistics excel.

Language

The language in the French-version of VigiFlow has been revised.
